

JAMES ERNEST TARIMAN WOLFE

Software Developer • Full-Stack TypeScript & Python

Lapu-Lapu City, Cebu | jameswolfe059@gmail.com | linkedin.com/in/jameswolfe | github.com/james-wolfe-04 | Portfolio

SUMMARY

Software developer who turns slow, manual processes into fast, tested web applications. Shipped full-stack features for a U.S.-based team, from PostgreSQL schema to NestJS API to Next.js dashboard, across four production repositories on a code-reviewed, CI-gated workflow. I find where time and accuracy are being lost, fix the cause rather than the symptom, then add the tests and monitoring that keep it fixed.

TECHNICAL SKILLS

Frontend: Next.js, React, TypeScript, JavaScript, Tailwind CSS, HTML/CSS, Recharts, TanStack Table, responsive & accessible UI

Backend & APIs: NestJS, Node.js, RESTful API design, Spring Boot, Supabase, API-key auth, caching, webhooks

Databases: PostgreSQL / Supabase (schema design, migrations, RPCs, row-level security, indexing), MySQL

Languages: TypeScript, Python, JavaScript, SQL, Java, Kotlin

Automation & Data: Python pipelines, data validation, pytest, Playwright, PDF/OCR extraction

Cloud & Tools: AWS (Cloud Architecting & Foundations), Docker, Git / GitHub (Git-flow, PR review), CI/CD (GitHub Actions), Ruff / ESLint / Prettier, Linux

WORK EXPERIENCE

Software Developer | Metawatt LLC, Florida, USA (Remote)

2026

- **Gave the team one live view of 30+ data sources across 10 states** by building the monitoring system end to end: a run-tracking PostgreSQL schema on Supabase (row-level security, indexed reads), NestJS intake and aggregation APIs, a Python reporting client, and a Next.js dashboard.
- **Put decisions on live numbers:** shipped the Trends and Breakdowns analytics modules in Next.js, React, and Recharts, covering run volume, coverage by state, failure reasons, and duplicate rates, all wired to production data.
- **Made the APIs faster and safer:** hardened NestJS/TypeScript endpoints with bounded query parameters and TTL caching to protect the database, API-key guards on intake, and correct state-code mapping for all 50 states.
- **Turned raw records into prioritized sales leads:** built the Python enrichment layer (record fetchers, a runnable SQL lead definition, net-to-owner scoring from lien priority) so the team works the highest-value leads first.
- **Replaced per-county code with one reusable module** keyed on the records platform, serving every county on it; each match is checked against the address on file and labeled confirmed, unverified, or mismatched, covered by 100+ unit tests.
- **Drove a data-sourcing decision:** benchmarked five property-data vendors and wrote the recommendation the team adopted.
- **Raised code quality across the team:** standardized data payloads across every pipeline with codebase-wide pytest guards; added retries and webhook-delivery tracking to integrations; containerized workers with Docker; reviewed teammates' PRs and kept CI lint gates green (Ruff, ESLint, Prettier).

Web Scraping / Data Analytics Intern | Metawatt LLC, Florida, USA (Remote)

Jan 2026 to Apr 2026

- **Promoted to Software Developer** at the end of the internship.
- Automated collection of surplus-fund and lead data from state and county reports in Python (Playwright, Selenium, BeautifulSoup), with custom serialization into structured directories so the analytics team could find and retrieve data faster.
- Delivered in an Agile team under a Team Leader, managed GitHub repositories, and presented progress on the "Excess Elite Lead Analytics" project.

PROJECTS

ETEEAPP: Academic Application System | Project Manager & Developer • eteeapp.netlify.app

2025

- Led the development team at Cebu Institute of Technology-University to a live release; wrote much of the backend business logic and frontend architecture.

KnowledgeForge: Peer Tutoring Platform | Full-Stack Developer • React, Spring Boot

2024

- Built both the Student and Tutor flows, from the REST API endpoints to the screens each user lands on.

SleepSync: Wellness App | Mobile Developer • sleepsyncapp.netlify.app

2024

- Engineered the Android client (Java/Kotlin) of a sleep-quality platform, designed so nightly tracking takes minimal effort.

EDUCATION

BS Information Technology | Cebu Institute of Technology-University

2021 to 2026

CERTIFICATIONS

AWS Academy Cloud Architecting • AWS Academy Cloud Foundations • Accenture Academy: AWS • Kaggle: Data Visualization
